Ampoule Holder

**Product Code:** BI

**Description:**
Ampoule holders are designed to secure biological indicator ampoules in the correct position within a liquid or non-liquid load, during the sterilisation cycle.

The clip mechanism ensures easy fitting and removal of the ampoule, and the rigid Teflon stem places the ampoule at the correct position within a container time and time again.

A bore through the centre of the stem allows a thermocouple wire to be located alongside the ampoule.

The holder can be supplied mated to a range of standard bottle caps or with a plain stem suitable for customers’ existing silicone rubber bung.

**Specification:**

<table>
<thead>

**Datasheet:** 039
Ampoule Holder

Validation Accessories:

- Pre-cut Validation Thermocouples
- Validation Thermocouple Looms
- GL45 Bottle Cap Gland for Thermocouple
- Thermocouple Entry Gland TCEG
- Y Piece Extension
- Tee Piece Extension
- Clamps, Tri-clover Blanks, Gaskets
- Type T thermocouple Wire
- Autoclave Load Probes
